

Coastal Water Quality Monitoring of the Romanian Black Sea Sector

Bologa, S. Alexandru

National Institute for Marine Research and Development "Grigore Antipa", Constanta,
Romania

Due to the present seriously degraded Black Sea ecosystem the necessity and opportunity of up dated national marine monitoring programmes, e.g. in Romania, are emphasized. Such programmes should match contemporary exigences and be harmonized at regional level based on previously gained positive expertise and experience such as, e.g., GEF/Black Sea Environmental Programme, EU/PHARE Chemical Monitoring Programme, EU/ECOS OUVERTURE- UALIPOL. Results aim to serve national central and local authorities and international organizations in adequate decision making with respect to marine environmental management and protection according to sustainable development needs
